DAVE Y. M. WONG ..... Engineering Aid II

FOREWORD

Prior to August 14, 1929, State supervision over dams was exercised either through the State Engineer or the State Railroad Commission. However, this supervision was limited in scope and extended to less than half of the dams in the State. In addition, several federal offices exercised supervision to various degrees over debris dams, dams owned by the government and those occupying government rights-of-way. There was a large number of dams, however, which had no form of supervision, either federal or state.

In 1928 the failure of a large dam resulted in a major disaster. Because of the potential hazard created by the many water storage projects in the State, the Legislature of 1929 enacted a law governing the supervision of dams in California, Chapter 766, Statutes of 1929, for the purpose of safeguarding life and property. The statute embraces three main features: (a) examination and approval of dams completed prior to the enactment of the Act; (b) approval of plans and specifications, and supervision of construction of new dams, and of the enlargement, alteration, repair or removal of existing dams; (c) supervision over maintenance and operation of all dams.

Under the statute, as amended, and in 1943 incorporated in the Water Code, this jurisdiction is exercised over dams that are 25 feet or more high, storing more than 15 acre-feet, or are more than six feet high storing 50 acre-feet or more. Dams owned and operated by agencies of the United States are exempt from State jurisdiction.

Supervision of dams by the State of California is administered by the Department of Water Resources. Plans and specifications for proposed new dams or work on existing dams are independently analyzed and reviewed to assure that the designs will result in safe structures. Proposed sites are investigated to determine their competency and the suitability of available construction materials. During construction, inspections are made for compliance with approved plans and specifications and to identify conditions disclosed during site development that may require changes in design. Existing dams are inspected periodically to disclose hazardous conditions needing correction.

Rules and regulations pertaining to supervision of dams are available on request to the Department of Water Resources.

A list of dams over which State supervision is exercised, as of January 1, 1965, is made available in this publication. This compilation includes statistical data concerning the dams. For the most part, the data herein have been supplied by the owners in the applications and plans submitted in accordance with the Water Code. Information found in subsequent letters, publications and tabulations by the owners has also been used when applicable. In some instances the data have been supplied by field survey. The various sources are sometimes in conflict and although the selected data have not been verified in detail as to accuracy, they are believed substantially correct. Any one who can supply missing data or corrections is asked to send such information to the Department of Water Resources, Box 388, Sacramento, California 95802, for use in future editions of this bulletin.

There are, as of January 1, 1965, 982 dams within the jurisdiction of the State, many of which are structures of considerable magnitude. The aggregate storage capacity of these dams is approximately 17,266,000 acre-feet and the total cost about $850,194,000.

Inactive applications for the approval of plans and specifications are also on file for 56 proposed dams. The actual construction of these dams has been indefinitely postponed by their owners for various reasons. These dams are not listed in this bulletin.

A list of dams in California owned or operated by agencies of the United States is included in the appendix. Appreciation is expressed to these agencies for their cooperation in supplying the data for these dams.

ARRANGEMENT OF DATA

The dams are grouped by county of location. Where the dam is located in more than one county, it is listed under the county of alphabetical precedence. An alphabetical listing by name of dam, cross referenced as to county of location, is included on pages 89 to 102. This arrangement will enable the user to locate the dam in which he is interested, knowing either the name or the location by consulting the appropriate listing.

Information regarding each dam is arranged so that data pertaining to the owner, location, reservoir, and drainage area will be found on the left-hand pages, and data pertaining to the dam will be found on the right-hand pages.

The tabulated values are determined in accordance with the definitions that follow:

Number – assigned by the department for identification and filing purposes.

Name – as assigned by the owner of the dam on the original application, or as subsequently changed upon written request of the owner.

Stream – as submitted on the application and revised to later editions of the United States Geological Survey topographic maps.

Use – use of the water is abbreviated as follows:

D – Domestic	MI – Mining
I – Irrigation	IN – Industrial
P – Power	R – Recreational
M – Municipal	S – Stock Water

Area of Reservoir – area at spillway crest elevation or at maximum operating level if headwater controls are used.

Maximum Storage Capacity – total capacity at maximum operat level and above streambed. Dead storage is included.

Drainage Area – areas less than 0.1 square mile are listed as square mile.

Type and Crest Length – applies to main dam only; does not clude auxiliary dams.

Purpose – purpose of the dam is abbreviated as follows:

S – Storage	FC – Flood control
D – Diversion	DC – Debris control
R – Regulation	A – Multi-purpose

Elevation of Crest – U.S.G.S. datum to nearest foot, when av able. Otherwise approximate U.S.G.S. datum.

Height – vertical distance from crest of dam (excluding parap if any) to original streambed at downstream toe.

Maximum Operating Level – reservoir water surface elevation highest controlled stage.

Approximate Yardage – total volume of principal material of d including auxiliary dams.

Approximate Cost – cost of the dam and appurtenant works. cludes cost of enlargements, if any. Does not incl powerplants, access roads, rights-of-way, reservoir cl ing, etc.

Year Completed – date the original construction was complet

X – Year unknown
UC – Under construction
NS – Not started
